

Colleen O'Toole
**LOCAL
EXPERT**

Colleen O'Toole is president of the Greater Cincinnati Health Council.

Vaccination of health-care workers is a primary strategy being used by hospitals in our region and throughout the country to protect patients from being exposed to respiratory illnesses, including flu. And for good reason: Influenza is highly contagious, it spreads before symptoms appear and it results in about 150,000 hospital admissions and 24,000 deaths annually.

The single-most effective way to prevent the flu is to get a flu shot each year. This is why all 34 hospitals in the Greater Cincinnati region provide free vaccination for their health-care workers and it's why the Centers for Disease Control and Prevention has recommended annual vaccination of health-care workers since 1981.

Approximately 90 percent of all employees in the region were

Vaccinating  health care workers  is one

way to help patients not get the flu .

The single-most effective way to prevent the flu

 is to get a flu shot  each year. That is why
