

# NCSC – Mathematics Lesson 5

Orchard #2 is 8ft x 8ft = 64ft<sup>2</sup> and has 4 trees.

How much space is needed for one tree?

$\frac{64^2}{4 \text{ trees}} = \frac{?^2}{1 \text{ tree}}$  to get one tree, student should divide the group of trees by four  $\frac{64^2}{4 \text{ trees} \div 4} = \frac{?^2}{1 \text{ tree}}$ .

If the student divides the trees by four, she/he must divide the area of the orchard by four

$\frac{64^2 \div 4}{4 \text{ trees} \div 4} = \frac{?^2}{1 \text{ tree}}$

# NCSC – Mathematics Lesson 5

---

Orchard #5 is 20ft x 20ft

20 ft.

20 ft.

Unit rate 16ft<sup>2</sup> per tree

4 ft.

4 ft.

# NCSC – Mathematics Lesson 5

The unit rate is area per tree:

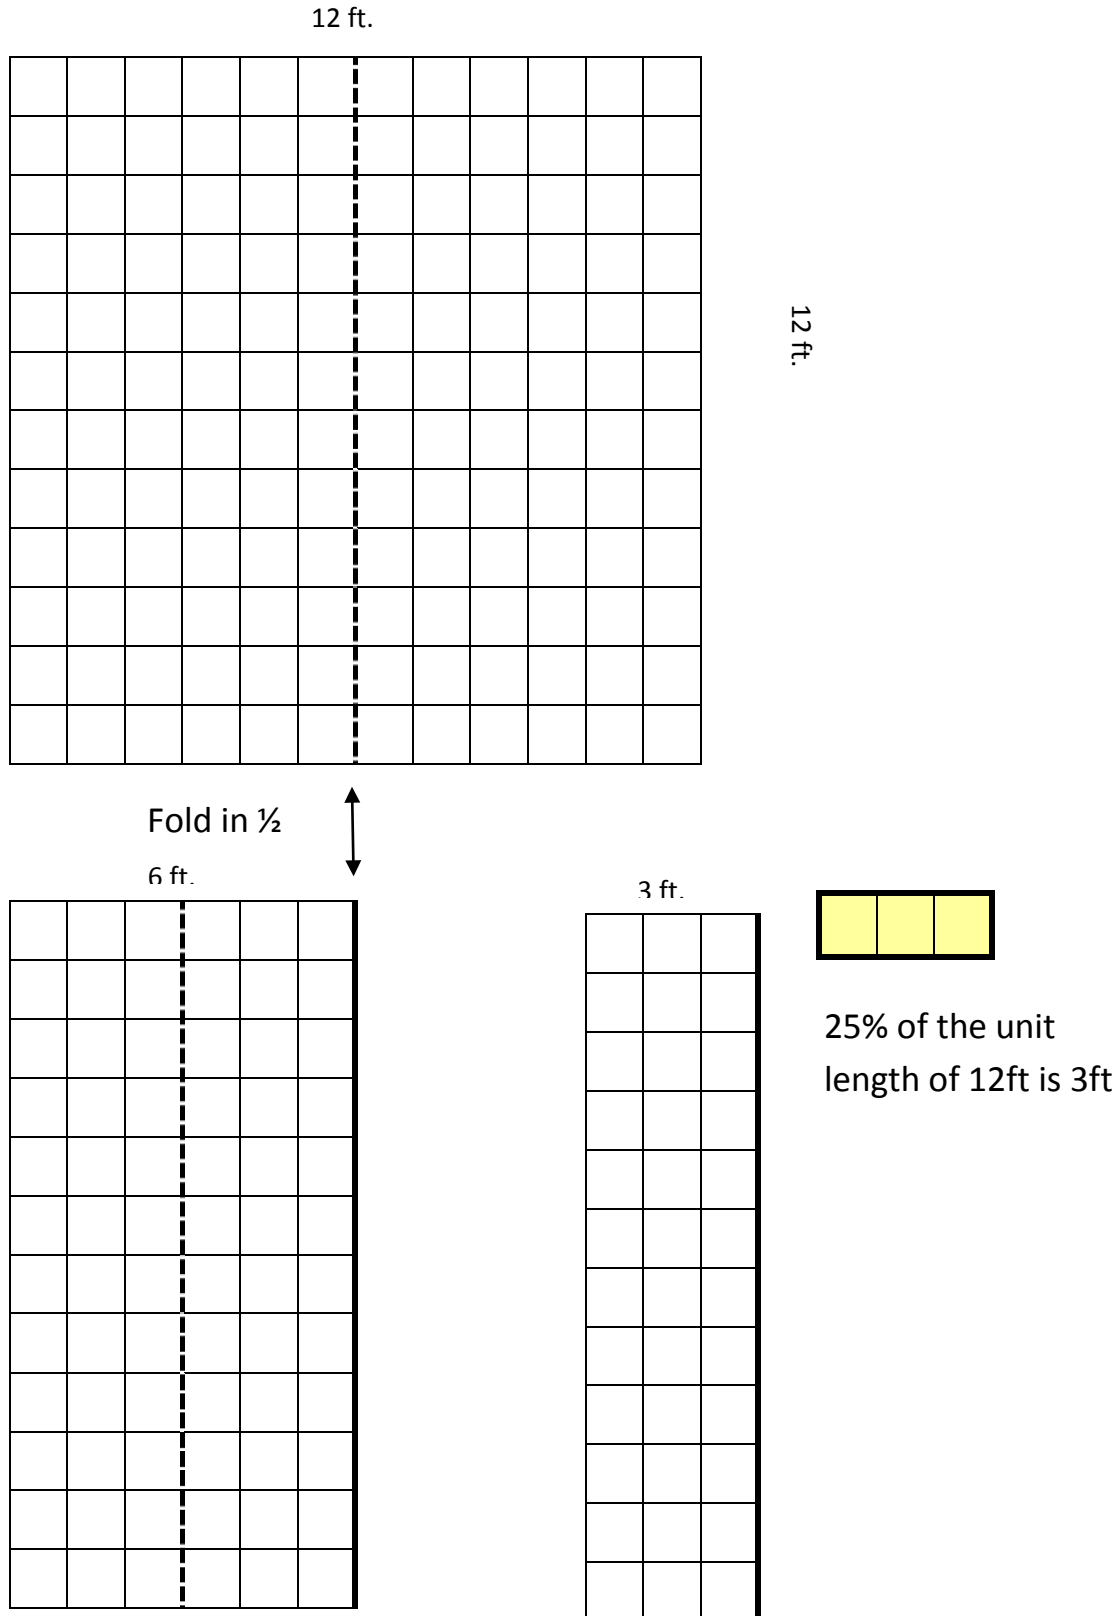

20 ft.

20 ft.

# NCSC – Mathematics Lesson 5

Orchard #3 + 25% Orchard #3

Fold in  $\frac{1}{2}$  again to make  $\frac{1}{4}$

# NCSC – Mathematics Lesson 5

---

Orchard #3 + 25% Orchard #3
